

## Weekly Build 30/11/2007

Inviato da ssjx  
venerdì 30 novembre 2007

Nuova build con interessanti novità per gli utenti di sistemi Unix.

Quest'ultimo snapshot infatti, oltre a risolvere svariati problemi con i plugin su queste piattaforme (fra cui quello con il Flash Player), aggiunge anche il supporto ai windowless plugins.

Per maggiori informazioni vi rimando al post di psmaas.

### Problemi noti:

- There might be some crashes when running widgets.
- Unread count in mail might be wrong.
- Opera on UNIX might crash if you close a tab while flash is being initialized.
- Just a few UNIX builds this time - and no, Sparc builds aren't among those...

### Changelog:

- Fixed garbled subjects in mail.
- Changed mail database version.
- Fixed spacers in skin.
- Removed minch from UI.
- XHTML documents are now saved with correct extension.
- Nicknames for folders now work in address bar.
- MathML documents served with the correct MIME type application/mathml+xml can now be opened directly.
- Fixed issue where messages could appear in wrong views or could appear with no information in message lists.

### UNIX:

- Enabled windowless plugins on UNIX.
- Acrobat Reader plugin now accept key input.
- Opening telnet and news links in external programs now works.
- Some fixes to dialogs out of focus.
- Fixed high memory and cpu usage when downloading torrents.

### Download

- Windows
- Windows Classic

- Macintosh
- UNIX
