

Weekly Build 01/02/2008

Inviato da ssjx
domenica 03 febbraio 2008

Nuova build con interessanti correzioni al supporto CSS e ad M2.

WARNING: These are development snapshots: they contain the latest changes, but they also have severe known issues, including crashes and data loss situations. In fact, they may not work at all.

Known issues

- Crash when you clear history while history search is disabled
- Format selector when saving pages is broken
- Some plugins on Mac don't work at all
- Plugins crash Opera on UNIX

Bugs fixed

- Images in mail and standalone images are now printed
- Significant mail startup speed improvement on systems with NTFS and ReiserFS filesystems, like Windows and openSUSE.
- Fixed a rare crash when importing Thunderbird mail
- Reduced CPU usage when downloading mail
- Fixed the "prioritize excludelist" option in urlfilter.ini
- Fixed import of IE favorites with dots in their name
- Fixed issue where you would get duplicate trash folders when using Opera Link
- Fixed a few spatial navigation issues (Shift+arrows to navigate on the page)
- The spam filter should start remembering marked mail on Windows now
- Fixed a CSS parser error that caused layout errors on Facebook, Yahoo! Mail, Last.fm etc.
- Fixed dynamic updating of CSS3 selectors (:first-child, :last-child, :empty etc. selectors)
- Opera now supports getClientRects and getBoundingClientRect
- Added support for the CSS color and background-color properties for the ::selection pseudo-element
- UNIX: Fixed a crasher when closing tabs when using the MDI controls (present without close button on tabs)
- UNIX: Tooltip generation CPU usage is again back to normal
- Windows: Torrent applications now show up correctly in the download dialog if you've disabled Bittorrent in Opera

Download

- Windows
- Windows Classic
- Macintosh

- UNIX
